Mission 01: build an agentic SEO system on your own site and data

A one-year membership for SEO, AI Search and content specialists. Weekly lessons from December 1, 2026, live Q&A, and a library of tested skills and agents. Taught in English.

WHAT YOUR TEAM BUILDS

- **Four agents** for site architecture, content planning, semantic audits and AI Search readiness.
- Built on **your own site, Search Console and AI Search data**, or a demo dataset.
- Every recommendation points to **the query, the page and the passage** behind it.
- Tests that show whether a new model or prompt is better **before you rely on it**.

WHAT YOU CAN CHECK

- **A Mission Log:** a one-page record of what the system can do and what changed.
- **A flag** for every passed Objective.
- **Certified Operator** certificate after all Objectives and the Final Mission, verifiable at certs.sensai.io.
- The system, its tests and skills **stay with your team**. It is not a rented tool.

TIME AND FORMAT

- Basecamp, seven Objectives and a Final Mission, **one new module a week** from December 1.
- **About 4 hours a week** during Season 1. Recordings for anyone who cannot join live.
- No prior Python needed: the AI agent writes and runs the code. Works with Claude Code, Codex or pi.

WHO LEADS IT

- **Robert Niechciał**, CTO & Partner at Vestigio, an SEO agency, and co-founder of SensAI Academy.
- Speaker and workshop leader at SEO conferences in Poland and abroad.
- **900+ students** in our programs in Poland; average lesson rating **4.84/5** across 1,267 ratings.
